

Cash Change Dispenser

DESCRIPTION

A vending machine returns change using only 50-dollar, 10-dollar, 5-dollar, and 1-dollar coins. To give the minimum total number of coins, the machine always dispenses the largest denomination possible first. Given an amount of money C to return, calculate the total number of coins dispensed.

INPUT FORMAT

The input contains a single positive integer C ($1 \leq C \leq 1000$).

OUTPUT FORMAT

Print the total number of coins required to form the amount C , followed by a newline.
