

Problem 7: Multiple of Eleven

DESCRIPTION

Write a program that reads a three-digit positive integer N and determines whether it is an exact multiple of 11.

INPUT FORMAT

The input contains a single three-digit integer N ($100 \leq N \leq 999$).

OUTPUT FORMAT

- If N is a multiple of 11, print: `N is a multiple of 11.`
- Otherwise, print: `N is not a multiple of 11.`

Replace `N` with the actual input number. Follow the sentence with a newline.

SAMPLE

Sample Input	Sample Output
121	121 is a multiple of 11.
