

Problem 5: Right-Angled Triangle

DESCRIPTION

According to the Pythagorean theorem, a triangle with side lengths a , b , and hypotenuse c is a right-angled triangle if and only if:

$$a^2 + b^2 = c^2$$

Given the three side lengths a , b , and c (where c is guaranteed to be the longest side), determine whether the triangle is a right-angled triangle.

INPUT FORMAT

The input consists of three positive integers a , b , and c , separated by spaces.

OUTPUT FORMAT

Print `right` if the sides form a right-angled triangle; otherwise, print `wrong`. Output should be followed by a newline.
