COMPUTER PROGRAMMING • MIDTERM

Hello World with Spaces

DESCRIPTION

Write a C program that prints the four lines shown in the sample output, exactly as shown.
Spaces are part of the output: runs of 3 spaces and leading spaces must be printed exactly.

INPUT FORMAT

There is no input.

OUTPUT FORMAT

Print the four lines. End every line with a newline \n, and print nothing after the last one.
No line has trailing spaces. Your output is compared character by character,
so check every space and every escape sequence carefully.

SAMPLE

Sample Input (none)

Sample Output (as printed)

```
Hello,   World!
   I said: "Hi!"
C:\NUK\CSIE  100%
Good luck!   Bye!
```

Sample Output (each space shown as ␣ so you can count them)

```
Hello,␣␣␣World!
␣␣␣I␣said:␣"Hi!"
C:\NUK\CSIE␣␣100%
Good␣luck!␣␣␣Bye!
```

Note: ␣ only marks one space character. Print a real space, not the ␣ symbol.
e.g. line 1 has 3 spaces between Hello, and World!; line 2 starts with 3 spaces;
line 3 has 2 spaces between CSIE and 100%.
