COMPUTER PROGRAMMING • MIDTERM

Watermelon

DESCRIPTION

A fruit stand has one watermelon with an integer weight w. The owner wants to cut it into exactly two parts so that each part has a positive even integer weight.
The two parts do not have to be equal. Write a C program that reads w and decides whether such a split is possible.

INPUT FORMAT

A single integer w ($1 \le w \le 100$).

OUTPUT FORMAT

Print YES if the watermelon can be split into two parts that are both positive even integers, otherwise print NO. Use uppercase letters exactly, and end the output with a newline.

SAMPLE

Sample 1 Input

```
8
```

Sample 1 Output

```
YES
```

Sample 2 Input

```
7
```

Sample 2 Output

```
NO
```
