

Job Expenses

DESCRIPTION

Robin has been traveling to sell software. He filed an expense report with receipts, but Robin provided a list of expenses *and* incomes: incomes are represented as positive integers, and expenses are represented as negative integers.

Given a single transaction record k , if it is an expense, determine how much Robin paid (as a positive amount). If it is an income, the expense paid is 0.

INPUT FORMAT

The input contains a single integer k ($-50\,000 \leq k \leq 500\,000$, $k \neq 0$).

OUTPUT FORMAT

Print the expense amount paid by Robin for this transaction (a non-negative integer), followed by a newline.

SAMPLE

Sample Input	Sample Output
-250	250
