

Proper Leap Years

DESCRIPTION

In the Gregorian calendar, leap years have 366 days instead of 365. A year is a leap year if it is divisible by 4, except for century years (ending in 00), which are leap years only if they are also divisible by 400.

Given a year Y , determine whether it is a leap year.

INPUT FORMAT

The input contains a single integer Y ($0 < Y < 9999$).

OUTPUT FORMAT

Print **Yes** if the year is a leap year, otherwise print **No**. Follow the output with a newline.

SAMPLE

Sample Input	Sample Output
2004	Yes
